REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Amended claim 1 recites that the irradiated syndiotactic 1,2-polybutadiene resin molded article is crosslinked by electron beam irradiation in which the irradiation dose is from 5 to 200 Mrad and the energy of the electron beam is from 20 to 5,000 kV. This recitation combined with the requirement that the tensile strength at the 50% point of the tensile strength curve of the irradiated syndiotactic 1,2-polybutadiene molded article is from 1.01 to 2.5 times (MPa) the tensile strength at the 50% point of the tensile strength curve of the syndiotactic 1,2-polybutadiene molded article (before irradiation) distinguishes the instantly claimed invention from the disclosures of the prior art of record and otherwise known to the Examiner. Ding et al teach electron beam irradiation at doses from 15 to 25 kGys (1.5 to 2.5Mrad) and teaches that exposure to the disclosed sterilizing dose may result in a measurable change in gel content, but Ding et al do not fairly teach the limitations in the instant claims. Doheny, Jr. teaches that a person skilled in the art would be able to calculate radiation dose and treatment voltage needed to effect required crosslinking of a polyolefinic film at different thicknesses in the preparation of heat shrinkable films, but does not specifically discuss electron beam crosslinking of a syndiotactic 1,2-polybutadiene molded article.

Furuichi et al (US 2004/0206362), having two common inventors with the instant application, claims a medical member comprising syndiotactic 1,2-polybutadiene having a crystallinity of 5% or more. A terminal disclaimer to the present application is of record in application 10/820,878.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
